

Project Overview

The system integration team at Gokhale Associate and Law Company undertook a project to check and repair systems across two branches, Jogeshwari and Churchgate. The team consisted of Tejas, Shailesh, Atharvaraj with specific roles allocated for checking and repairing systems. The project involved using Belarc Advisor, a system information tool, for creating profiles of installed software and hardware, and checking for updates and antivirus status using both the control panel and command prompt.

Key findings included outdated Windows patches, low RAM, absence of SSDs, and expired antivirus software. Corrections involved updating systems, enhancing performance, and renewing antivirus protections. The project successfully repaired and optimized desktops, laptops, printers, and scanners, improving operational efficiency and security for the client.

Team Details

The system integration team at Gokhale Associate and Law Company undertook a project to check and repair systems across two branches, Jogeshwari and Churchgate. The team consisted of Tejas, Shailesh, Atharvaraj. Each member had specific roles allocated for checking and repairing systems. They collaborated efficiently to ensure the successful completion of the project.

Tejas, Shailesh, Atharvaraj worked together to utilize Belarc Advisor, a system information tool, for creating profiles of installed software and hardware. They also checked for updates and antivirus status using both the control panel and command prompt. Key findings from their assessments included outdated Windows patches, low RAM, absence of SSDs, and expired antivirus software.

To address these issues, the team focused on updating systems, enhancing performance, and renewing antivirus protections. Through their efforts, the project successfully repaired and optimized desktops, laptops, printers, and scanners. This resulted in significant improvements in operational efficiency and security for the client.

Methodology

The methodology employed by the system integration team at Gokhale Associate and Law Company for checking and repairing systems across the Jogeshwari and Churchgate branches involved a structured approach. The team, comprising Tejas, Shailesh, Atharvaraj, Arif, and Tanvi, was assigned specific roles in the process.

The initial phase of the project focused on utilizing Belarc Advisor, a comprehensive system information tool, to create detailed profiles of the installed software and hardware on the systems under review. This step allowed the team to gather essential data for further analysis.

Subsequently, the team conducted checks for updates and antivirus status using a combination of the control panel and command prompt. Through this method, they were able to identify critical issues such as outdated patches, insufficient RAM, the absence of Solid State Drives (SSDs), and expired antivirus software on the systems.

The findings from these assessments served as the basis for formulating corrective actions. The team proceeded to update systems with the latest patches, enhance performance by addressing low RAM concerns, introduce SSDs where necessary to improve speed and reliability, and renew antivirus protections to safeguard against security threats.

Overall, the methodology adopted by the team successfully led to the repair and optimization of desktops, laptops, printers, and scanners. This proactive approach not only improved the operational efficiency of the systems but also enhanced security measures, ultimately benefitting the client in terms of functionality and data protection.

Findings

During the system check and repair project conducted by the system integration team at Gokhale Associate and Law Company, several key findings were identified. These findings had a significant impact on the performance, security, and operational efficiency of the client's systems.

The team, comprising Tejas, Shailesh, Atharvaraj, Arif, and Tanvi, utilized Belarc Advisor, a comprehensive system information tool, to create profiles of the installed software and hardware. Through this process, they were able to pinpoint various issues affecting the systems.

The key findings included:

- Outdated Windows patches: The systems were found to have outdated Windows patches, leaving them vulnerable to security breaches and performance issues.
- Low RAM: Insufficient RAM was identified in several systems, hindering their ability to run applications smoothly and efficiently.
- Absence of SSDs: The absence of Solid State Drives (SSDs) in the systems contributed to slower data access speeds and reduced overall performance.
- Expired antivirus software: Antivirus software on the systems was found to be expired, leaving them at risk of malware and cyber threats.

Addressing these issues was crucial to improving the overall health and functionality of the client's systems. By updating the systems, enhancing performance, and renewing antivirus protections, the project successfully repaired and optimized desktops, laptops, printers, and scanners. This led to a tangible improvement in operational efficiency and security for the client.

Corrections and Updates

In the project carried out by the system integration team at Gokhale Associate and Law Company, corrective actions involved a series of updates and enhancements to improve system performance, security, and overall efficiency. The team, consisting of Tejas, Shailesh, Atharvaraj, Arif, and Tanvi, identified key areas that required attention, such as outdated Windows patches, low RAM, absence of SSDs, and expired antivirus software.

To address these issues, the team implemented a range of corrective actions. This included updating systems to ensure they were running the latest software versions, installing additional RAM to improve performance, incorporating SSDs to enhance speed and efficiency, and renewing antivirus protections to bolster security measures.

These corrective actions not only fixed the identified issues but also significantly optimized the desktops, laptops, printers, and scanners used within the organization. As a result, the project successfully improved operational efficiency and security for the client, ensuring that their systems were up-to-date, secure, and performing at their best.

Outcomes

The system integration team at Gokhale Associate and Law Company, consisting of Tejas, Shailesh, Atharvaraj, Arif, and Tanvi, took on a project to inspect and revamp systems across the Jogeshwari and Churchgate branches. Their specific roles focused on examining and fixing systems to enhance operational efficiency and security for the client. Utilizing Belarc Advisor, a system information tool, the team created profiles of the installed software and hardware. They also checked for updates and antivirus status through both the control panel and command prompt.

Through their meticulous assessment, the team discovered several key issues plaguing the systems, including outdated Windows patches, low RAM, the lack of SSDs, and expired antivirus software. To address these shortcomings, the team undertook necessary corrections by updating systems, boosting performance, and renewing antivirus protections.

As a result of their efforts, desktops, laptops, printers, and scanners were successfully repaired and optimized. This comprehensive overhaul not only brought the systems up-to-date but also significantly improved both the operational efficiency and security posture of Gokhale Associate and Law Company. The client can now enjoy systems that are not only functioning optimally but are also adequately safeguarded against potential threats.

Server 1 (churchgate)

1. The system comprises a total of 5 disks.

2. I've reviewed the system's performance using the Task Manager to assess resource utilization.

The screenshot shows the Windows Task Manager Performance tab. The top bar indicates overall system usage: CPU 6%, Memory 48%, Disk 1%, Network 0%, and GPU 1%. Below this, a table lists running processes, categorized into 'Apps (3)' and 'Background processes (59)'. The table columns are: Name, Status, CPU, Memory, Disk, Network, GPU, GPU engine, Power usage, and Power usage L... (likely Limit). The 'Apps' section lists Google Chrome (11), Settings, and Task Manager. The 'Background processes' section lists various system services and applications like AdjustService, Adobe Acrobat, Adobe Reader, Antimalware Service Executable, AnyDesk, AppCenter, Application Frame Host, Calculator, Canon Advanced Printing Tech..., COM Surrogate, Device Association Framework, and others. The bottom of the window shows a watermark for 'Activate Windows' and a 'Go to Settings to activate Windows' button.

Name	Status	6% CPU	48% Memory	1% Disk	0% Network	1% GPU	GPU engine	Power usage	Power usage L...
Apps (3)									
Google Chrome (11)		0%	38.4 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Settings		0%	0 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Task Manager		3.1%	21.2 MB	0.1 MB/s	0 Mbps	0%		Low	Very low
Background processes (59)									
AdjustService (32 bit)		0%	3.4 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Adobe Acrobat Update Service (...)		0%	0.1 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Adobe Reader and Acrobat Men...		0%	1.1 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Antimalware Service Executable		0%	167.8 MB	0 MB/s	0 Mbps	0%		Very low	Very low
AnyDesk (32 bit)		0%	20.7 MB	0 MB/s	0 Mbps	0%		Very low	Very low
AppCenter (32 bit)		0%	90.9 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Application Frame Host		0%	5.5 MB	0 MB/s	0 Mbps	0%		Very low	Very low

4. We have efficiently cleared temporary and cache files to optimize system resources and improve overall performance.

Temp files:

%temp% files

prefetch files:

5. We have activated virus and threat protection and app and browser control to safeguard the system, providing ongoing defense against potential security risks and ensuring a protected computing environment.

6. We have transitioned the power plan from balanced to high performance, ensuring optimal system speed and responsiveness for enhanced user experience.

7. We have applied all available Windows updates to ensure system security, stability, and access to the latest features.

8. A legitimate Windows license ensures legal usage and regular updates, providing security and support. Cracked versions of Windows licenses often lack official updates, leading to security vulnerabilities, potential system instability, and legal repercussions due to copyright infringement.

```
Command Prompt
Microsoft Windows [Version 10.0.19045.3803]
(c) Microsoft Corporation. All rights reserved.

C:\Users\user 1>slmgr -d11
C:\Users\user 1>slmgr -xpr
C:\Users\user 1>
```

9. We executed a disk cleanup to free up storage space and enhance system efficiency.

10. We perform a weekly check for disk fragmentation to organize data efficiently, optimizing system performance and ensuring smoother operation.

11. memory integrity has been enabled for advanced security measures.

12. We conducted a scan to identify and address any corrupted files, ensuring the integrity and reliability of the system.

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.19045.3803]
(c) Microsoft Corporation. All rights reserved.

C:\Windows\system32>sfr /scannow
'sfr' is not recognized as an internal or external command,
operable program or batch file.

C:\Windows\system32>sfc /scannow

Beginning system scan. This process will take some time.

Beginning verification phase of system scan.
Verification 100% complete.

Windows Resource Protection found corrupt files and successfully repaired them.

Conclusion

The system integration project at Gokhale Associate and Law Company has proven to be a resounding success, resulting in enhanced system performance, heightened security measures, and increased operational efficiency. Through the effective utilization of tools such as Belarc Advisor and the implementation of proactive corrections, the project has not only met but exceeded its objectives.

The diligent efforts of the system integration team, comprised of individuals such as Tejas, Shailesh, Atharvaraj, Arif, and Tanvi, have played a pivotal role in ensuring the successful execution of the project across the Jogeshwari and Churchgate branches. By identifying key areas for improvement and taking decisive action to rectify issues, the team has significantly boosted client satisfaction levels and facilitated smoother business operations.

With the identification of outdated Windows patches, low RAM configurations, lack of SSDs, and expired antivirus software, the project was able to implement necessary corrections to bring systems up to optimal working conditions. This not only enhanced performance but also fortified security measures, thereby safeguarding critical business operations from potential threats.

In conclusion, the system integration project at Gokhale Associate and Law Company stands as a testament to the power of strategic planning, proactive intervention, and collaborative teamwork. The project's successful repair and optimization of desktops, laptops, printers, and scanners have not only improved operational efficiency but have also bolstered the overall resilience of the company's technological infrastructure. As a result, the project has paved the way for continued success, ensuring that the company remains at the forefront of technological advancement and operational excellence.
